HDS - SPEAKER KITS - S200W subwoofer amplifier input sensitivity mod

29/4/2006

APPLICATION NOTE:

The replacement P830667 has a lower SPL sensitivity than the original 8" P830491 subwoofer.

<u>Problem</u>: It has been found when using the P830667 8" with the S200W subwoofer amplifier the amp Level control will need to be increased between 34 to max volume to achieve sufficient sound level with some Hometheatre Speaker systems.

SOLUTION:

I recommend increasing the S200W amplifier input sensitivity to match the new P830667 8" driver in the XLS800 Speaker Kits (OR) in DIY P830667 +S200W combo's sold by WES. See Figs 1 & 2 below.
